

SPRAY APPLICATION OF AVIGUARD® USING THE AVIGUARD ACCUSPRAYER

IMPORTANT: STORE AVIGUARD® IN THE REFRIGERATOR UNTIL YOU ARE READY TO USE. DO NOT STORE OPEN PACKETS.

PREPARATION

STEP 1 - WEAR A PAIR OF GLOVES AND A DUST MASK

STEP 2 - Measure out 250ml of CHLORINE FREE WATER per 1000 birds. Gently mix AVIGUARD® into the water. 1 dose per bird is required (e.g. for 5,000 birds use 5,000 doses in 1.25 litres water), and allow solution to stand for 10-15mins. AVIGUARD® should be used within 1 hour of mixing the product in water.

STEP 3 - Pour the AVIGUARD® solution into the vessel of the “AVIGUARD ACCUSPRAYER” and replace lid. If you have more than 5 litres of solution cover the remainder and leave in a cool place until you are ready to use.

APPLICATION

STEP 1 - Calculate the volume of AVIGUARD® solution required per box of birds. 0.25 ml of AVIGUARD® solution is required per bird e.g. for 100 birds per box :

$$0.25\text{ml} \times 100 \text{ birds} = 25 \text{ ml per box .}$$

STEP 2 - Set the dose level at the volume calculated in step 1 (e.g. 25ml) on the “AVIGUARD ACCUSPRAYER”. Depress handle and squeeze solution until it fills the chamber in the dosing gun. For ease of application we recommend 2 doses of 12.5 ml.

STEP 3 - Place the boxes of birds in a row on the floor and start spraying. **Lighting needs to be up to encourage bird activity. Apply the pre-determined amount ensuring that all birds are covered.**

STEP 4 - Wait a minimum of 30 minutes from the time you started spraying before you tip the birds. This gives the birds time to peck the AVIGUARD® off each other and ingest it. Check birds frequently to ensure they do not smother in boxes.

STEP 5 - When application is completed wash equipment with warm water.
